**WAL-MART STORES ANNOUNCES SOLAR POWER
PILOT PROJECT IN CALIFORNIA**

Wal-Mart Stores announced completion of a 390-kilowatt solar power system at the Sam's Club store in Chino. The store is the first of seven Wal-Mart facilities in California to receive high-efficiency SunPower solar power systems, totaling 4.6 megawatts, and is part of a major purchase of solar power from SunPower and other solar power providers for approximately 22 Wal-Mart stores, Sam's Clubs and distribution centers in Hawaii and California. The stores included in the pilot project are expected to achieve savings over their current utility rates as soon as their first day of operation.

"We are very pleased with SunPower's progress on the Chino solar project," said Kim Saylor-Laster, vice president of energy for Wal-Mart. "Wal-Mart is moving forward with its commitment to conserve energy, reduce energy costs and lower greenhouse gas emissions - and this project is a step in the right direction."
